

Professional Heated Eyelash Curler

Description: perfectly curled eyelashes are no longer a problem. The professional eyelash curler by Ardell works on the principle of heating of the head, which ensures that the eyelashes curl. The head of the curler changes its color so you can easily find out when it is ready to curl your eyelashes.

Directions:

- Disconnect the curler in the place where the arrows are and insert the R03/AAA 1.5V MICRO BATTERY (not included) so that the + plus sign on the battery is towards the arrow on the curler case.
- Then connect the parts of the curler again so that the two arrows point towards each other.
- Slide the switch to the ON position to turn the curler on and the indicator light will illuminate - in about 15 seconds the curler is heated enough to curl your eyelashes.
- When finished, slide the switch down to to the OFF position to turn the curler off, the light then goes out and the curler is turned off.
