

## **PROGRAMMABLE CURLING IRONS**

Available in 4 sizes (16mm, 19mm, 25mm and 32mm), this curling iron heats up very quickly and is ready to use in just a moment.

The temperature selector lets you set the exact temperature desired (30 settings). For fine hair, use a lower temperature to get the best results and to respect the hair's integrity perfectly.

For thick, wavy or hard to curl hair, use a higher temperature for best results.

## **FEATURES**

- Titanium tourmaline coating on the heating barrel

16mm - BAB2171TTE

19 mm - BAB2172TTE

25mm - BAB2173TTE

32mm - BAB2174TTE

- On/Off switch - On indicator light
- Automatic switch off
- 30 temperature settings (130 °C to 200 °C) - linear adjustment
- Stay-cool tip
- Swivel cord
- Built-in metal stand

## **TEMPÉRATURE ADJUSTMENT**

This curling iron also has a built-in stand that allows you to put him down during use and in this way it protects your surfaces. There is also a stay-cool tip to make styling hair easier and safer.

## **INSTRUCTIONS FOR USE**

- Plug the unit in and press on the 'I' button. The iron will begin to heat up. Set the temperature using the selector. The red indicator light will flash for a while until the unit reaches the desired température. When the light is fixed, the unit is ready to use.
- Divide dry or damp hair into equal sections and comb before curling. Press on the clamp lever, place the iron halfway along the section of hair and spread the hair evenly between the clamp and the barrel. Pull the iron gently to the end of the hair. To prevent crimps, make

sure the hair is properly coiled under the clamp, in the direction of the curl. Place the clamp on top of the section to curl the hair under. To curl the hair out, place the clamp underneath the section.

- Coil the hair up to where you want the curls to start, being careful not to touch the scalp with the barrels. Keep the iron in place for 5 to 8 seconds. For tighter, bouncier curls, work with only a little hair at a time. For looser, softer curls, work with more hair.

- To remove the iron, press on the clamp lever and pull the iron out. Wait until the hair has cooled before brushing or combing to allow the curls to 'set'. For best results, we recommend using BaBylissPRO™ styling products.

- After use, press the 'O' button and unplug the unit. Wait until it has cooled completely before putting

it away.

- If the unit remains unused for longer than about 72 minutes, the auto shut-off will turn the unit off; this option increases the life of the barrels and provides greater safety.

## **MAINTENANCE**

Once unplugged and cooled, the iron may be wiped with a damp cloth. Make sure it is completely dry before plugging it in again.

### **Titanium-Tourmaline coating**

Incomparable durability. Heat distribution with perfect uniformity and perfect heat stability for optimum results.

## **WARNING**

The barrel becomes very hot in a few seconds and should not touch skin once plugged in. This iron becomes extremely hot when set to the highest temperature. Always test the iron on a section of hair to make sure that the setting is appropriate for the hair.
