

Dyeing with Illumina Color

Always use suitable gloves; do not wash your hair.

Important:

Do not use metallic bowls or other metallic implements.

1. The mixing ratio

Always mix in a ratio of 1:1 (apart from pastel toning; see point 6), for example 60 ml Illumina Color + 60 ml Welloxon Perfect.

6% (20 Vol) – darker/the same tone depth/lightening by 1 shade

9% (30 Vol) – lightening by 2 shades

12% (40 Vol) – lightening by 3 shades

2. All-over applications of the same/a darker shade

Apply the dye mix immediately from the roots to the ends.

Reaction time:

with heat (15-25 minutes)

without heat (30-40 minutes)

3. All-over applications – lightening

Step one – only apply the dye mix to the lengths and the ends. Apply about 2 cm from the scalp.

Reaction time:

with heat (10 minutes)

without heat (20 minutes)

Step two – apply the dye mix to the roots.

Reaction time:

with heat (15-25 minutes)

without heat (30-40 minutes)

4. Application to grown-out roots

Start dyeing from the roots. First apply the dye to the places with the largest amounts of grey hair. When lightening, start applying to the areas where you require the largest amount of lightening.

A TIP – when lightening, apply more dye than during usual dyeing

Reaction time:

with heat (15-25 minutes)

without heat (30-40 minutes)

5. Balancing the colours on the lengths and ends

Once the reaction time is up, dampen your hair well and emulsify the dye on the lengths and at the ends.

Reaction time:

without heat (5-10 minutes)

6. Pastel toning

This procedure requires the even lightening of the hair.

Tone depths of 9/0 and lighter can be used on natural hair. We recommend the use of the Illumina Color shades from series 9/ and 10/ for a beautiful, delicate pastel shade.

Always mix with the 1.9% (10 Vol) Color Touch emulsion in a ratio of 1:2. Apply to your hair immediately from the roots to the ends and leave it to react for 15 minutes without the application of heat.

Important: In order to achieve an even colour result, comb your hair every 5 minutes during the reaction period.

7. Final care

Once the reaction time is over, wash your hair thoroughly in warm water with Wella Professionals Brilliance Shampoo or SP Color Save Shampoo. Use

Wella Professional Color Post Treatment or SP Color Save Emulsion to neutralise any oxidation residue and stabilise the dye.

Caution:

These are professional hair dyes which have been designed for use in hairdressing salons. Applications undertaken at home should always be preceded by consultation with a hairdresser about the suitable hair shade and the strength of the activation emulsion. The resulting colour always depends on the type and condition of the hair.

SAFETY INSTRUCTIONS

Only for professional use. Hair dyes can cause severe allergic reactions. Read and follow these instructions. This product is not intended for use by persons under

16 years of age. Black henna temporary tattoos may increase the risk of an allergy.

Do not dye your hair if:

- you have a rash on your face or a sensitive, irritated or damaged scalp;
- you have previously experienced a reaction after dyeing your hair;
- you have previously experienced a reaction to temporary black henna tattoos.

Avoid contact with your eyes. If the product comes into contact with your eyes, rinse them immediately with plenty of water. Do not use the product to dye your eyelashes or eyebrows. Rinse your hair well after application. Use suitable protective gloves. Keep out of the reach of children.
